

Water Plan Grant Application

March 2022 Board Meeting

Trout Unlimited (TU) staff will work with landowners in the Tomichi Creek and Cebolla Creek watersheds to restore instream and riparian habitat, improve irrigation water management, improve watershed health, and drought resiliency. Tomichi Creek and Cebolla Creek are both headwater tributaries to the Upper Gunnison River. The proposed restoration activities will improve instream habitat and riparian health by reducing erosion, increasing vegetative cover on stream banks, reconnecting/re-establishing floodplains, to increase adjacent ground water levels. Restoration prescriptions will differ to suit specific land uses and management goals. Low-tech processed based restoration methods and grazing management will be used on the Cebolla Creek site and more traditional bank and channel stabilization technics used at the Tomichi site. Both locations will include irrigation water control improvements that are expected to improve irrigation water management, wetlands, and stream flows.

Project partners include private landowners, the National Resource Conservation Service (NRCS), USFWS Partners for Fish and Wildlife (PFW), Colorado Parks and Wildlife (CPW), and the Upper Gunnison River Water Conservancy District.

Description

Environmental Construction 5/1/2022 5/1/2022

Trout Unlimited (TU) staff will work with landowners in the Tomichi Creek and Cebolla Creek watersheds to restore instream and riparian habitat, improve irrigation water management, improve watershed health, and

drought resiliency. Tomichi Creek and Cebolla Creek are both headwater tributaries to the Upper Gunnison River.

The proposed restoration activities will improve instream habitat and riparian health by reducing erosion, increasing vegetative cover on stream banks, reconnecting/re-establishing floodplains, to increase adjacent ground water levels. Restoration prescriptions will differ to suit specific land uses and management goals. Low-tech processed based restoration methods and grazing management will be used on the Cebolla Creek site and more traditional bank and channel stabilization technics used at the Tomichi site. Both locations will include irrigation water control improvements that are expected to improve irrigation water management, wetlands, and stream flows.

Project partners include private landowners, the National Resource Conservation Service (NRCS), USFWS Partners for Fish and Wildlife (PFW), Colorado Parks and Wildlife (CPW), and the Upper Gunnison River Water Conservancy District.

Funding from the CWCB Water Plan Grant will be used for, labor, excavation and materials. The two participating landowners are under contract with the NRCS and have utilized NRCS staff for restoration design and planning.

Measurable Results

New Storage Created (acre-feet)
 New Annual Water Supplies Developed or Conserved (acre-feet), Consumptive or Nonconsumptive Existing Storage Preserved or Enhanced (acre-feet)
 New Storage Created (acre-feet)
 New Storage Created (acre-feet)
 Length of Stream Restored or Protected (linear feet)
 Efficiency Savings (dollars/year)
 Efficiency Savings (acre-feet/year)
 Area of Restored or Preserved Habitat (acres)
 Quantity of Water Shared through Alternative Transfer Mechanisms or water sharing agreement (acre-feet)
 Number of Coloradans Impacted by Incorporating Water-Saving Actions into Land Use Planning Number of Coloradans Impacted by Engagement Activity

Water Project Justification

This project will improve watershed health and cold water trout habitat.

This project will help meet the following 3 of the goals listed in the Gunnison BIP, pp 30-31. Primary Goal:

1. Protect existing uses: The infrastructure and habitat improvements planned will protect and improve environmental, and agricultural uses on properties located on headwater tributaries to the Gunnison River.

Complementary Goals

6. Maintain or, where necessary, improve water quality throughout the Gunnison Basin: The proposed in-channel improvements will reduce erosion and improve channel stability, eroded banks near the structures will recover and riparian vegetation established. Over time, it is expected that stream channels will transform to a narrower deeper profile leading to lower water temperatures and providing better refuge for trout.

The Colorado Water Plan Water Plan frequently references collaboration and multiple use projects. In section

6.6, page 6-157, the third goal listed is "Support the development of multipurpose projects and methods that benefit environmental and recreational water needs as well as water needs for communities or agriculture". This project will involve coordination between NGO's, private land owners, federal and local agencies to address environmental, recreational, and agricultural water needs.

On page 1-6 of the Colorado Water plan sites three core water values. The second value is "Efficient and effective water infrastructure promoting smart land use." This project will upgrade ranch infrastructure and demonstrate how irrigation water management and wetland enhancement can be used to manage healthy riverine ecosystems and productive agriculture.

Budget and Schedule

This Statement of Work shall be accompanied by a combined Budget and Schedule that reflects the Tasks identified in the Statement of Work and shall be submitted to CWCB in excel format.

Reporting Requirements

Progress Reports: The applicant shall provide the CWCB a progress report every 6 months, beginning from the date of issuance of a purchase order, or the execution of a contract. The progress report shall describe the status of the tasks identified in the statement of work, including a description of any major issues that have occurred and any corrective action taken to address these issues.

Final Report: At completion of the project, the applicant shall provide the CWCB a Final Report on the applicant's letterhead that: (1) Summarizes the project and how the project was completed. (2) Describes any obstacles encountered, and how these obstacles were overcome. (3) Confirms that all matching commitments have been fulfilled. (4) Includes photographs, summaries of meetings and engineering reports/designs. The CWCB will pay out the last 10% of the budget when the Final Report is completed to the satisfaction of CWCB staff. Once the Final Report has been accepted, and final payment has been issued, the purchase order or grant will be closed without any further payment.

Payment

Payment will be made based on actual expenditures and must include invoices for all work completed. The request for payment must include a description of the work accomplished by task, an estimate of the percent completion for individual tasks and the entire Project in relation to the percentage of budget spent, identification of any major issues, and proposed or implemented corrective actions. Costs incurred prior to the effective date of this contract are not reimbursable. The last 10% of the entire grant will be paid out when the final deliverable has been received. All products, data and information developed as a result of this contract must be provided to as part of the project documentation.

Performance Measures

Performance measures for this contract shall include the following: (a) Performance standards and evaluation: Grantee will produce detailed deliverables for each task as specified. Grantee shall maintain receipts for all project expenses and documentation of the minimum in-kind contributions (if applicable) per the budget in the Budget & Schedule Exhibit B. Per Water Plan Grant Guidelines, the CWCB will pay out the last 10% of the budget when the Final Report is completed to the satisfaction of CWCB staff. Once the Final Report has been accepted, and final payment has been issued, the purchase order or grant will be closed without any further payment. (b) Accountability: Per Water Plan Grant Guidelines full documentation of project progress must be submitted with each invoice for reimbursement. Grantee must confirm that all grant conditions have been complied with on each invoice. In addition, per Water Plan Grant Guidelines, Progress Reports must be submitted at least once every 6 months. A Final Report must be submitted and approved before final project payment. (c) Monitoring Requirements: Grantee is responsible for ongoing monitoring of project progress per Exhibit A. Progress shall be detailed in each invoice and in each Progress Report, as detailed above. Additional inspections or field consultations will be arranged as may be necessary. (d) Noncompliance Resolution: Payment will be withheld if grantee is not current on all grant conditions. Flagrant disregard for grant conditions will result in a stop work order and cancellation of the Grant Agreement.

Water Plan Grant - Statement of Work - Exhibit A

Statement Of Work					
Date:	11/20/2021				
Name of Grantee:	Trout Unlimited				
Name of Water Project:	Tomichi and Cebolla Creeks Restoration Package				
Funding Source:	Water Plan Grant Watershed Restoration and Rec Category				
Water Project Overview:					

Trout Unlimited (TU) staff will work with landowners in the Tomichi Creek and Cebolla Creek watersheds to restore instream and riparian habitat, improve irrigation water management, improve watershed health, and drought resiliency. Tomichi Creek and Cebolla Creek are both headwater tributaries to the Upper Gunnison River.

The proposed restoration activities will improve instream habitat and riparian health by reducing erosion, increasing vegetative cover on stream banks, reconnecting/re-establishing floodplains, to increase adjacent ground water levels. Restoration prescriptions will differ to suit specific land uses and management goals. Low-tech processed based restoration methods and grazing management will be used on the Cebolla Creek site and more traditional bank and channel stabilization technics used at the Tomichi site. Both locations will include irrigation water control improvements that are expected to improve irrigation water management, wetlands, and stream flows.

Project partners include private landowners, the National Resource Conservation Service (NRCS), USFWS Partners for Fish and Wildlife (PFW), Colorado Parks and Wildlife (CPW), and the Upper Gunnison River Water Conservancy District.

Funding from the CWCB Water Plan Grant will be used for, labor, excavation and materials. The two participating landowners are under contract with the NRCS and have utilized NRCS staff for restoration design and planning.

Project Objectives:

Tasks

Task 1 - L&P Ranch Stream and Irrigation Improvement

Description of Task:

L&P Ranch is located on 30 miles south of Gunnison in the Cebolla Creek Watershed. This task will include stream channel restoration, riparian pasture fencing, and irrigation management improvements. The work is coordinated effort between L&P Ranch, TU, NRCS, and Partners for Fish and Wildlife.

Low tech restoration techniques will be implemented on the ranch in Cebolla Creek and Powderhorn Creek in order to improve stream processes and hydrologic function. Structures will include bank attached and mid-channel PALS and wicker weirs. The fencing will split the property from one field into four and allow for grazing to be implemented in a way that benefits long term production of forage, riparian health, and wildlife habitat. Cross fencing will limit the duration of livestock access to Cebolla and Powderhorn Creeks. Two structures for water control will be installed to control and manage irrigation water from the MB and A Ditch more effectively. The structure on the MB ditch will allow irrigators to better distribute water on the irrigated meadow and direct tail water from neighboring upgradient fields back to Cebolla Creek thereby improving stream flows through the reach.

Method/Procedure:

L&P Ranch will hire a fencing contractor to construct 7,000 feet of fence during the summer of 2022. Plans for the fence were developed by NRCS to meet NRCS standards. The segment of fence that crosses Cebolla Creek will be a swing fence to allow debris and ice to pass unobstructed when livestock are not on the property.

L&P ranch will hire a stream restoration contractor to construct PALS and wicker weirs on Cebolla and Powderhorn Creek. Willow material for the structures will be sourced on site. Logs and lager woody debris will be sources from a neighboring property in coordination with fire mitigation efforts. Restoration work is planned for the fall of 2022 and expected to take 3-4 weeks.

Two board stop water control structures will be fabricated by a local contractor to install in the MB and A ditch. L&P ranch will use ranch labor and equipment to install the structures in fall of 2022.

Deliverable:

Final report documenting expenses and summarizing completion of riparian pasture fence, 2 water control structures.

Before, after, during construction photos points of stream restoration structures 1.5 miles of stream protected/restored.

Tasks

Task 2 – Tomichi Preserve Stream Restoration

Description of Task:

This task is a joint effort between the NRCS, USFWS Partners for Wildlife Program, the Upper Gunnison Water Conservancy District, Trout Unlimited and Tomichi Creek Preserve LLC to restore and 2500 feet of Tomichi Creek stream channel and permanently protect 100 acres of degraded riparian/wetland habitat on Tomichi Creek Preserve. Tomichi Creek Preserve is a conservation subdivision designed to improve an ecologically degraded piece of property located 2 miles south of Gunnison on Tomichi Creek. The portion of Tomichi creek running through the property was channelized 60-80 years ago an became uniformly wide and shallow, with little bedform diversity. Over time it became increasingly entrenched and lost connectivity to lateral wetlands and numerous oxbows adjacent to the old channel. In 2005, the first phase of this project was initiated with a WRP easement on 80 acres of the property and a stream restoration project that returned 3,000 feet of Tomichi Creek back into its original meandering channel. This final phase, which CWCB funding is requested, will induce meandering on an additional 1500 feet of stream near the western edge of the property and restore 1000 feet of stream near the eastern edge of the property.

Method/Procedure:

NRCS stream restoration engineering staff have completed survey and design of the two segments where restoration will take place. The Latest design is included in as Exhibit B.

The Upper Reach, located on the eastern end of the property, will include serval rock structures, sod mats and transplanted willows to maintain channel grade and stability. The majority of rock has been purchased and stage at the site. Excavation contactor has been selected and will begin work work during the summer/fall of 2022.

Design of the Lower Reach, near the western end of the property, will be modified to avoid conflict with sewer line crossing under the creek in the middle of that reach. NRCS is currently working on an updated design that will include channel structures and excavation of designed meanders.

Restoration of this segment is expected to take place in 2022 when the contractor is mobilized on site.

Deliverable:

Final report documenting expenses and before, after, during construction photos points of stream restoration structures

2500 feet of stream restored.

100 acres of wetland protected.

Tasks

Task 3 – Grant Admin NICRA

Description of Task:

This task will involve contracting, insurance, payments to contactors, reimbursement invoices to CWCB, and accounting of project expenses.

Last Updated: May 2021
Method/Procedure:
13.74% of project equipment and contracted expenses is included in the budget.
Deliverable:
Project oversight, reporting and management of tasks.
······································

Repeat for Task 3, Task 4, Task 5, etc.

Budget and Schedule

This Statement of Work shall be accompanied by a combined Budget and Schedule that reflects the Tasks identified in the Statement of Work and shall be submitted to CWCB in excel format.

Reporting Requirements

Progress Reports: The applicant shall provide the CWCB a progress report every 6 months, beginning from the date of issuance of a purchase order, or the execution of a contract. The progress report shall describe the status of the tasks identified in the statement of work, including a description of any major issues that have occurred and any corrective action taken to address these issues.

Final Report: At completion of the project, the applicant shall provide the CWCB a Final Report on the applicant's letterhead that:

- Summarizes the project and how the project was completed.
- Describes any obstacles encountered, and how these obstacles were overcome.
- Confirms that all matching commitments have been fulfilled.
- Includes photographs, summaries of meetings and engineering reports/designs.

The CWCB will pay out the last 10% of the budget when the Final Report is completed to the satisfaction of CWCB staff. Once the Final Report has been accepted, and final payment has been issued, the purchase order or grant will be closed without any further payment.

Payment

Payment will be made based on actual expenditures and must include invoices for all work completed. The request for payment must include a description of the work accomplished by task, an estimate of the percent completion for individual tasks and the entire Project in relation to the percentage of budget spent, identification of any major issues, and proposed or implemented corrective actions.

Costs incurred prior to the effective date of this contract are not reimbursable. The last 10% of the entire grant will be paid out when the final deliverable has been received. All products, data and information developed as a result of this contract must be provided to as part of the project documentation.

Performance Measures

Performance measures for this contract shall include the following:

(a) Performance standards and evaluation: Grantee will produce detailed deliverables for each task as specified. Grantee shall maintain receipts for all project expenses and documentation of the minimum in-kind contributions (if applicable) per the budget in Exhibit C. Per Grant Guidelines, the CWCB will pay out the last 10% of the budget when the Final Report is completed to the satisfaction of CWCB staff. Once the Final Report has been accepted, and final payment has been issued, the purchase order or grant will be closed without any further payment.

(b) Accountability: Per Grant Guidelines full documentation of project progress must be submitted with each invoice for reimbursement. Grantee must confirm that all grant conditions have been complied with on each invoice. In addition, per Grant Guidelines, Progress Reports must be submitted at least once every 6 months. A Final Report must be submitted and approved before final project payment.

(c) Monitoring Requirements: Grantee is responsible for ongoing monitoring of project progress per Exhibit A. Progress shall be detailed in each invoice and in each Progress Report, as detailed above. Additional inspections or field consultations will be arranged as may be necessary.

(d) Noncompliance Resolution: Payment will be withheld if grantee is not current on all grant conditions. Flagrant disregard for grant conditions will result in a stop work order and cancellation of the Grant Agreement.

SHEET 01 OF 17

GENERAL NOTES

- 1. All work shall comply with the construction specifications, drawings, and other contract requirements.
- 2. All notes and specifications are directed to the Contractor, unless stated otherwise.
- 3. Keep at least one copy of final drawings, specifications, and stormwater management plan on-site during construction.
- 4. Use an excavator with a hydraulic thumb to place boulders, logs, and rootwads.
- 5. Verify site conditions at the work site before mobilization. Locate and mark all underground and overhead utilities within the construction limits, including septic systems, water lines, irrigation pipes, wells, and underground tanks.
- 6. Provide erosion control measures and best management practices to prevent runoff from disturbed areas and exposed soils from entering surface waters or wetland areas. Filter muddy runoff or discharges from disturbed areas to prevent an increase in turbidity of surface water (seeps, springs, streams, rivers, lakes, and wetlands). See erosion control notes for more information.
- 7. Preserve existing vegetation to greatest extent possible. Save and replace plants and sod patches when practical, especially willow clumps.
- 8. When fence is present within work areas, remove and replace as needed to complete work.
- 9. Accomplish in-stream work during low flow conditions. Minimize the disturbance.
- 10. Finish grade to slopes as specified on the drawings. Blend grades to match existing grades. Work includes minor grading, and sloping "flat" areas to at least 2% to provide positive drainage.
- 11. Take precautions to avoid spilling fuel or oil. If a fuel or oil spill occurs, properly clean the affected area and dispose of any contaminated soils to prevent surface or ground water contamination. A spill response kit is required while equipment is operating. See specifications for more details.
- 12. Store or stage equipment, fuels, lubricants, and other potential contaminants at least 50 feet away from the stream, surface waters, wetlands, or other sensitive habitats.
- 13. Remove, store, and replace topsoil to restore disturbed areas that do not have other specified surfacing. Seed and mulch all disturbed soil surfaces with native grass seed according to the specifications.
- 14. Restore access and staging areas used during construction to pre-existing conditions or better. Plan the movement of equipment and materials to minimize disturbance, and to limit the number of trips to and from each work site.
- 15. All excavation work is unclassified (See Specifications for the definition of "unclassified excavation"), unless noted otherwise. All earthwork required by and shown on the drawings is included in the work.
- 16. Stake bankfull elevations at the work site before installing structures or other work. The Engineer will provide bankfull elevations by station, or will help identify bankfull in the field.
- 17. Provide structures according to typical details, structural tables, and proposed cross-sections, unless noted otherwise or changed in the field for site-specific conditions.
- 18. Typical details show the required components for the work, but existing site conditions will vary. Field-adjust to match existing conditions.
- 19. All plan dimensions are true horizontal, and vertical dimensions are true vertical.

drawings and specifications at a different location or for any other purposes.

- 20. Replace or reset disturbed property corner pins or other survey monuments using services of a state-licensed professional land surveyor.
- 21. Property lines, if shown, are approximate.
- 22. Given the dynamic nature of natural streams and the highly variable topography of riparian areas, field adjustments are expected. Promptly notify the Owner or Engineer if a field adjustment is required. Design changes require the Engineer's approval.
- 23. Whenever possible, get on-site assistance from the Engineer or Stream Restoration Specialist, especially for first installation of each type of stream structure or component.
- 24. Inform the Owner of any conflicts or discrepancies among the drawings, details, and specifications. The Engineer or engineer's designated representatives are the only people authorized to make changes to the drawings, details, or specifications. This is a site-specific design. Do not use these

GENERAL NOTES FOR EROSION & SEDIMENT CONTROL

1. All erosion and sediment (E&S) control measures without specific pay items are sub contract documents, use best management practices (BMPs) for E&S control as define Criteria Manual, Volume 3, Denver CO, whichever is more stringent.

 To help prevent the introduction of invasive, non-native plants and organisms to wor site. There shall be no clumps of soil, mud, organic material, or plant materials on or in
 Biodegradable hydraulic fluid is not required, unless the authority having jurisdiction and an immediate response to stop fluid leaks is required by the general notes and con

Use the following additional E&S control BMPs as required (subsidiary to pollution corroughening, temporary seeding, mulching, erosion control wattles, biodegradable erosic diversions. Provide other E&S controls as required by the drawings and specifications.
 Erosion and sediment control measures shall be constructed, stabilized, and function those measures.

6. After the finished site is stable, remove temporary E&S measures. Immediately stab Biodegradable measures above bankfull flow line may remain.

7. Construction access to the site is restricted to the location(s) shown on the drawings on the drawings or marked in the field. Only disturb areas as required for construction.
8. Stockpile heights shall not exceed 35 feet. Stockpile slopes shall be 2H:1V or flatter, temporarily stockpiled soils left for 6 or more days. Use temporary seeding on soil stock 9. Seed and mulch disturbed areas or finish graded areas that will be left bare for 6 or 10. Maintain all erosion control measures throughout construction and until the site is si runoff event (rainfall equal to ½-inch or more, or snow-melt of 6-inches or more). Accomout, repair, replacement, re-grading, re-seeding, re-mulching, etc. required maintenance 11. When using pumps for de-watering operations, filter the discharge with a special sti 12. Additional requirements are included in the construction specifications, on the constructor may use additional BMPs to limit erosion and control sediment incidental set is solved.

GENERAL CONSTRUCTION SEQUENCE

THE FOLLOWING CONSTRUCTION SEQUENCE INCLUDES RECOMMENDATIONS REGARD TO EROSION AND SEDIMENT (E&S) CONTROL.

1. MOBILIZE EQUIPMENT AND MATERIALS TO THE SITE, AND ESTABLISH STAG ACCESS ROAD AND ENTRANCE. KEEP ALL CONSTRUCTION TRAFFIC WITHIN TO 2. INSTALL SILT FENCE OR WATTLES AROUND STAGING, STOCKPILE, AND PAR INSTALL SILT FENCE, WATTLES, AND OTHER E&S MEASURES AT LOWER ENDS

3. CLEAR AND GRUB AREAS WITHIN CONSTRUCTION AREAS AS REQUIRED TO SLOPES, INSTALL SILT FENCE ACROSS DISTURBED AREAS (PERPENDICULAR T

4. FOLLOW A LOGICAL SEQUENCE OF WORK TO LIMIT THE AMOUNT OF EXPOS PROTECTION MEASURES BEFORE DISTURBING UPSTREAM AREAS. IF SPECIFIC EARLY IN THE CONSTRUCTION SEQUENCE.

5. DIVERT STREAMS, DITCHES, OR OTHER CONCENTRATED FLOWS FLOW ARC DIVERSION DITCHES, BERMS, PUMPS, OR OTHER BEST MANAGEMENT PRACTI 6. REMOVE ROCK CHECK DAMS AS DOWNSTREAM AND UPSTREAM PORTIONS

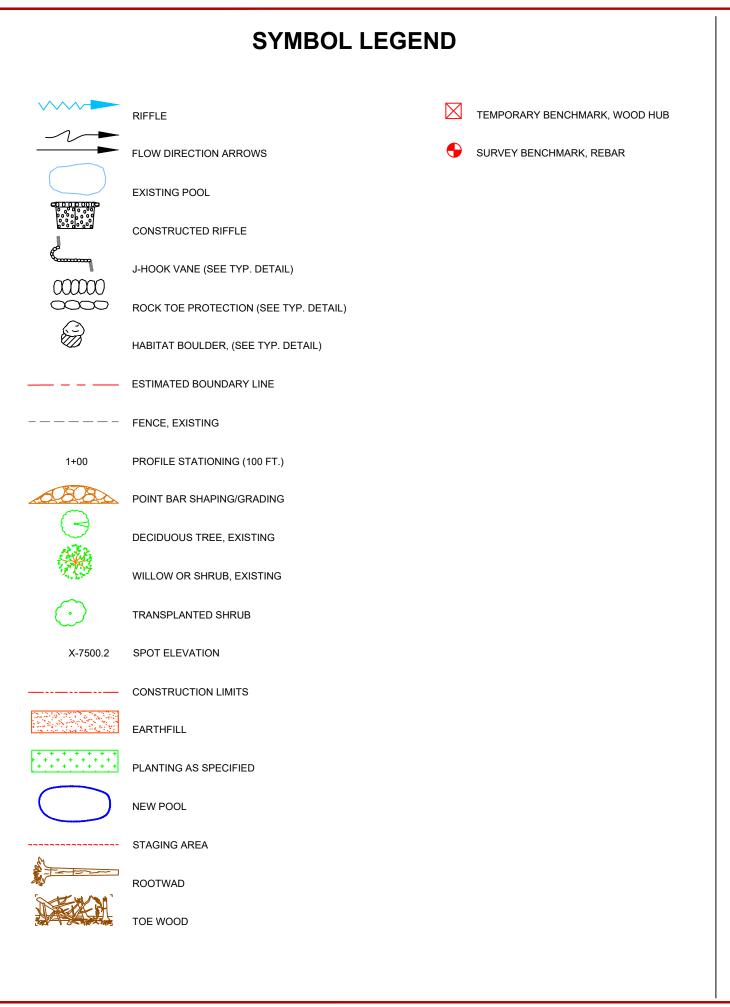

7. TEMPORARILY SEED AND MULCH SITE AS REQUIRED THROUGHOUT CONST AREAS FOLLOWING FINAL GRADING OPERATIONS.

8. CAREFULLY DEMOBILIZE EQUIPMENT FROM THE SITE. STABILIZE AND REST PRE-CONSTRUCTION CONDITIONS OR BETTER.

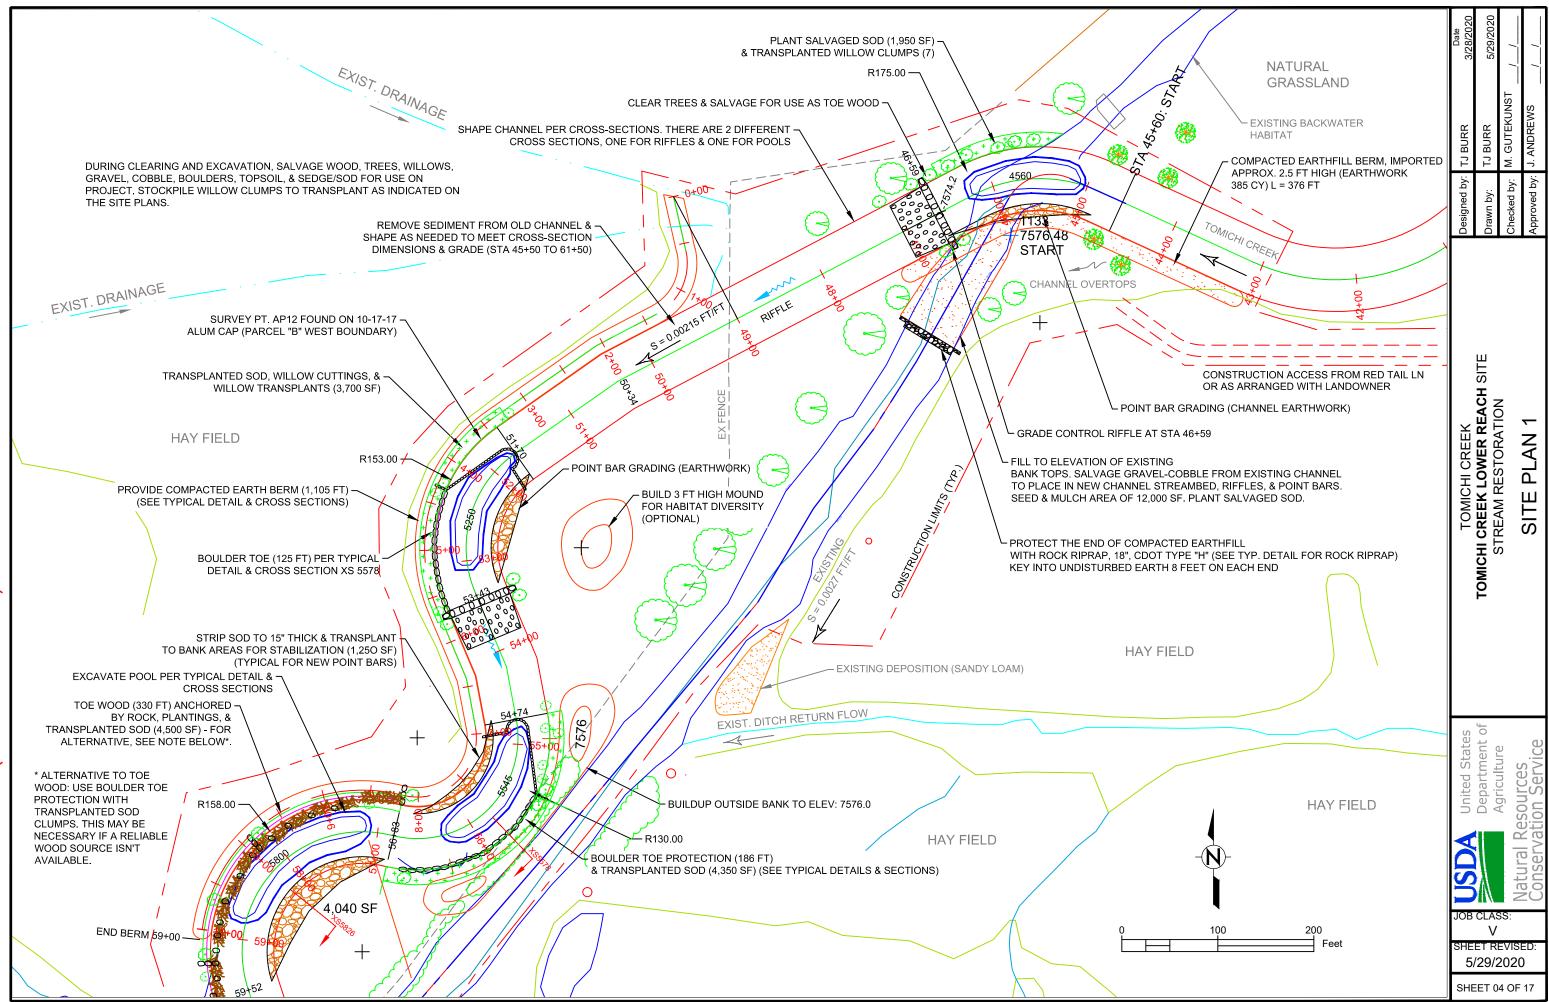

9. REMOVE NON-BIODEGRADABLE E&S MEASURES AFTER THE SITE IS STABIL

To whom it may concern,

The proposed L&P Ranch project in the Powderhorn Valley has an obligated interest from the Natural Resources Conservation Service (NRCS). The NRCS holds a contract with the L&P Ranch for instream improvements, irrigation water control structures, and fencing to facilitate grazing management improvements. Low tech restoration techniques will be implemented on the ranch in Cebolla Creek and Powderhorn Creek in order to improve stream processes and hydrologic function. Structures will include bank attached and mid-channel PALS and wicker weirs. The fencing will split the property from one field into four and allow for grazing to be implemented in a way that benefits long term production of forage and wildlife habitat. This cross fencing will also limit the duration of livestock access to Cebolla and Powderhorn Creeks. IN this project phase, one structure for water control will be installed to more effectively control and manage irrigation water from the MB and A Ditch. The structure will be a simple steel structure with stack boards that allow for irrigation water to be applied or to pass by to gain the desired soil moisture of approximately 10 acres. Additional irrigation improvements are planned, some needing immediate attention as issues are causing erosion that jeopardizes the integrity of the ditch system and pasture and hay fields. The development of this project has been successful due to the effective collaborative effort from cooperative landowners, US Fish and Wildlife Service, Trout Unlimited, Gunnison Conservation District, Colorado Parks and Wildlife, and the NRCS. Thank you for your consideration in the support of the L&P Ranch conservation project that will offer a suite of ecosystem services benefits for years to come.

Sincerely,

Daniel Olson – NRCS Resource Conservationist Gunnison Field Office
