**NORTH PARK BASIN  
WATER LEVEL MEASUREMENTS  
2024**

This report contains the basic groundwater level data collected from wells in the North Park basin. Acquisition and publication of this information is a cooperative effort between the well owners and the Colorado Division of Water Resources. The project is part of a statewide groundwater level monitoring program funded by Senate Bill 200 (1987 legislative session). This legislation directed that a portion of the fees collected for water well permit applications be used for the establishment of a program to monitor water-level trends throughout the state.

The report contains water level measurements for 14 wells measured in September of 2024. The wells are listed by name in numerical order and the locations of those wells in the geographic context of the basin are shown on the following map. The wells are completed in the alluvial aquifer, the North Park aquifer and the Coalmont aquifer. Water levels are generally consistent with previous measurements, although an anomalous 12 foot decline was measured at NP-10. Solar-powered pumping can impact the measurements. Future measurements will determine if this reading is erroneous or consistent with a localized trend.

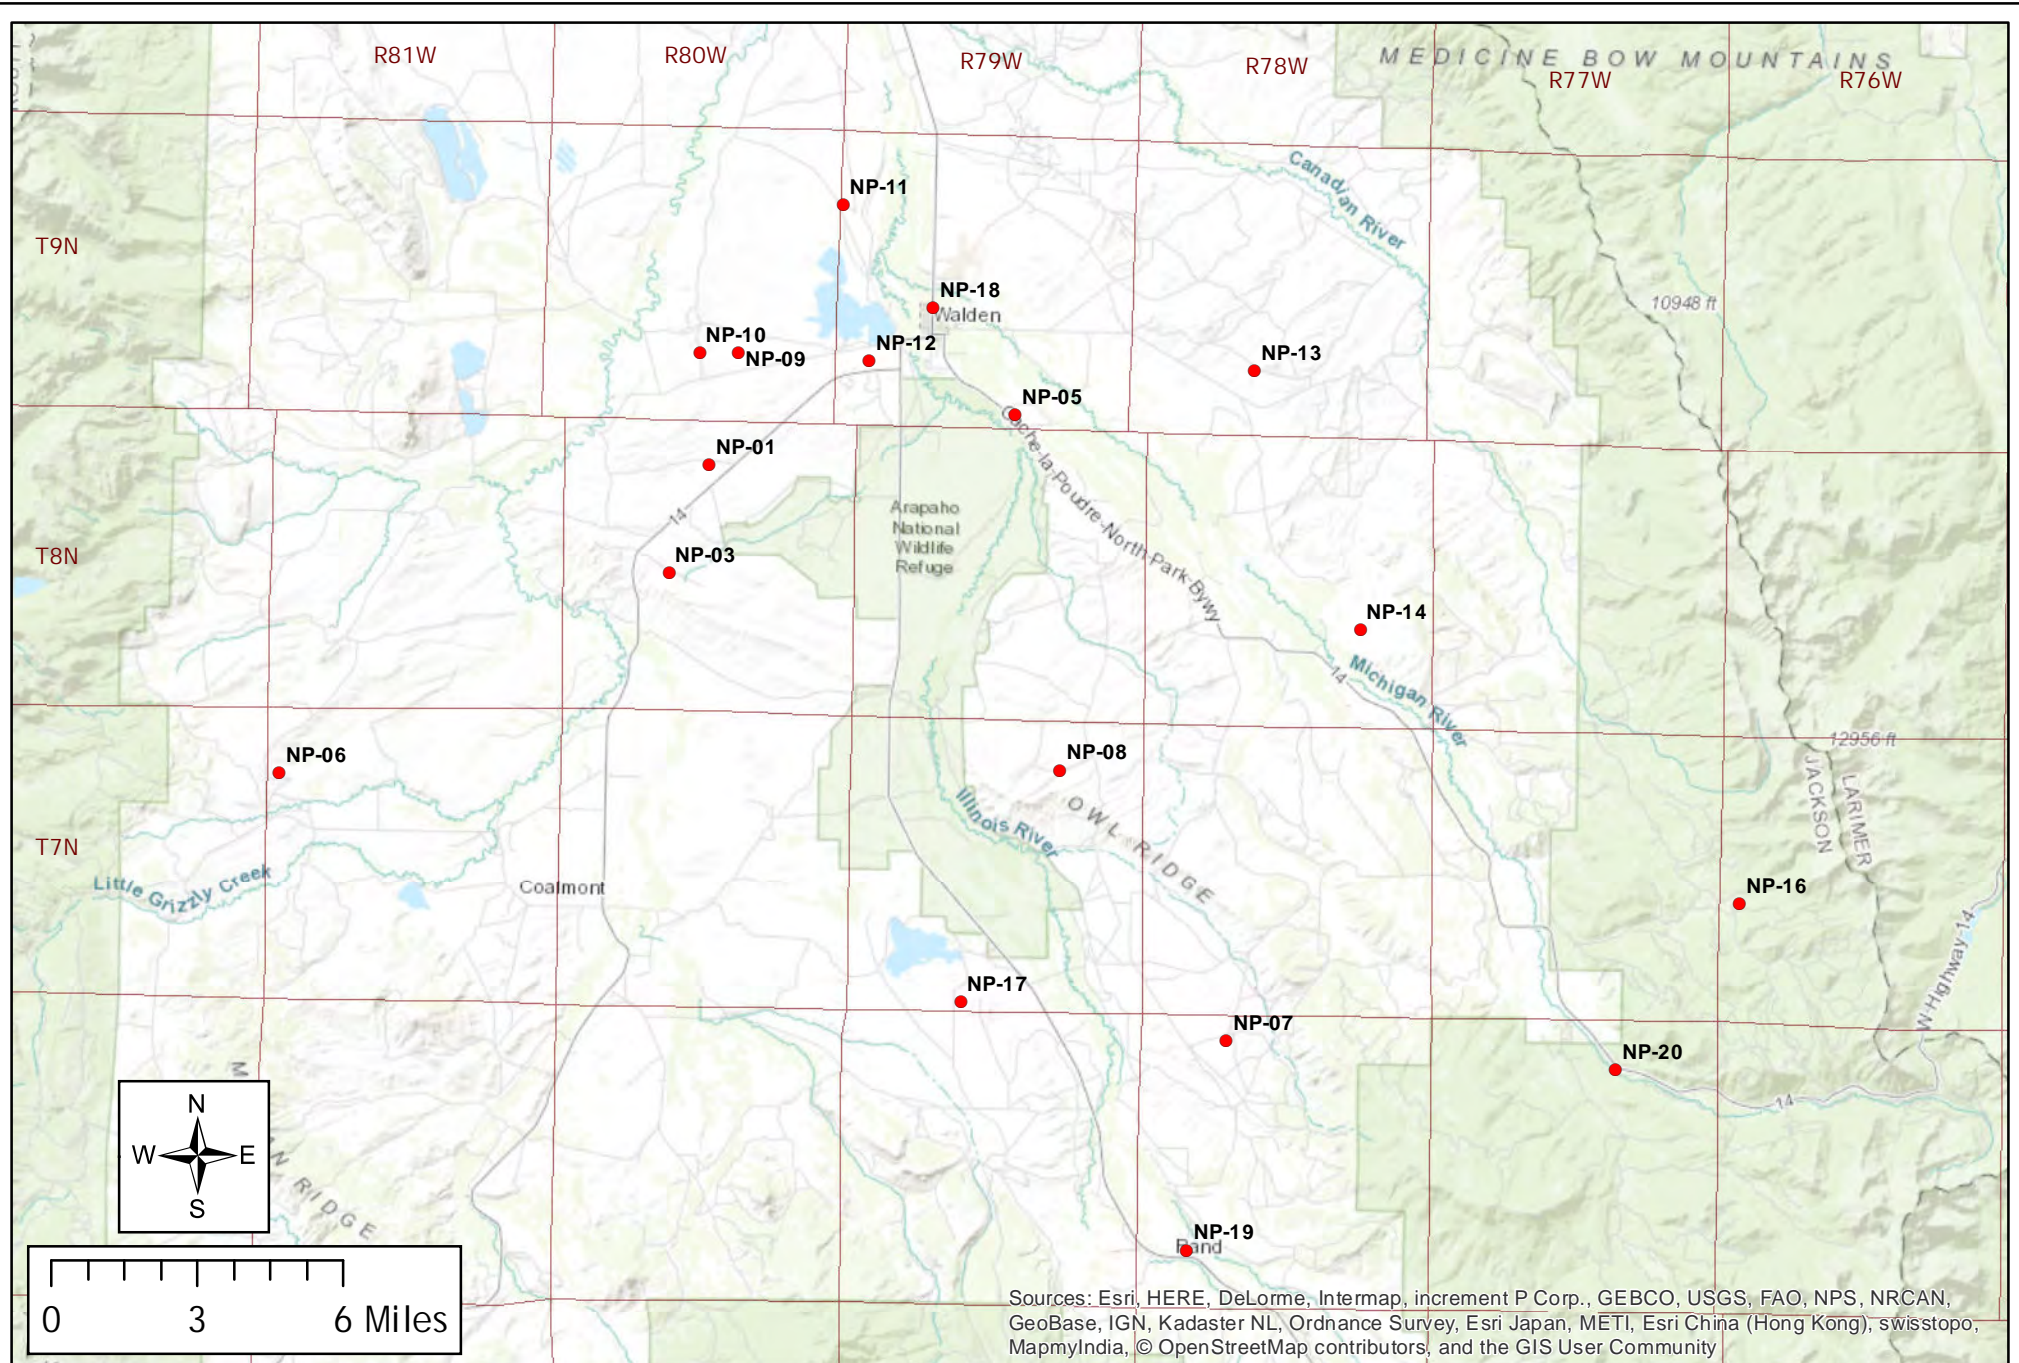

An electronic copy of this report is available on the Division of Water Resources website:
