## LOST CREEK DESIGNATED GROUNDWATER BASIN WATER LEVEL MEASUREMENTS 2025

This report contains basic data concerning the depth to and elevation of groundwater in the Lost Creek Designated Groundwater Basin collected in early-February and early-March 2025. As in previous reports, the accompanying data tables only list data from the last 10 measurements, though the hydrographs display the full period of record. Wells lacking measurements for the past 10 years have been removed from the monitoring program and are no longer included in the publication. Acquisition and publication of this information is a cooperative effort between the well owners, Lost Creek Ground Water Management District (LCGWMD), and the Colorado Division of Water Resources. The project is part of a statewide groundwater-level monitoring program funded by Senate Bill 200 (1987 legislative session). This legislation directed that a portion of the fees collected for water well permit applications be used for the establishment of a program to monitor water-level trends throughout the state.

A total of 21 wells were measured in 2025. The locations of the wells included in this report and the extent of the alluvial aquifer are shown on Figure 1. Previous work in the basin (Figure 2, Watterson and Topper, 2011) suggests that analysis of groundwater levels by sub-regions is appropriate. Water-level measurements are typically recorded in the winter or early spring of each year. Shorter- and longer-term changes in water levels are described using 1-, 5- and 10-year comparisons. The 2025 water levels produced the following general conclusions:

### North Area: North of Roggen/I-76 to Hwy 34

- Depth to water ranges from 19 to 43 feet. Water levels declined between 2024 and 2025, decreasing by an average of 1.44 feet, after increasing by a similar amount the prior year. These values were likely affected by the absence of three monitoring wells (S-23A, S-24 and S-26A) which were not part of the monitoring program this year due to private property access issues. Longer-term comparisons indicate water level declines of approximately 2.62 feet over 5 years, and 12.35 feet over 10 years.

### Middle Area: Between Roggen/I-76 and Prospect Valley/Hwy 52

- Depth to water ranges from 21 to 73 feet. Water levels substantially declined between 2024 and 2025, decreasing by an average of 2.85 feet; however, the water level in GS-2 did rise by 0.36 feet, the only reported water level increase in this sub-region. S-2 was dry for the first time since 2022, which is consistent with the steeper water level declines measured across the basin. Longer-term comparisons indicate an approximate decrease of 9.04 feet over 5 years, and a decrease of 9.07 feet over 10 years.

### South Area: South of Prospect Valley/Hwy 52 to 144th Avenue

- Depth to water ranges from 32 to 127 feet. Water levels declined by an average of 6.93 feet between 2024 and 2025. Longer-term comparisons indicate a decrease of approximately 9.93 feet over 5 years, and a decrease of 8.74 feet over 10 years. Significant declines over 10 feet were measured in GS-5 and LC-9 in 2025.

On average, groundwater levels fell significantly across all three areas with an average decline of 3.89 feet. The 5-year comparison showed an average decrease of approximately 8.02 feet. The 10-year comparison shows a decline of 7.55 feet. A water-table elevation map, produced for the 2011 Colorado Geological Survey aquifer recharge and storage study, is included to assist stakeholders in evaluating groundwater-flow directions (Figure 2).

With growing interest in Lost Creek alluvial aquifer as a potential area for aquifer recharge and storage, the LCGWMD, Colorado Geological Survey, U.S. Geological Survey, and cooperators have been evaluating the existing groundwater reservoir and additional storage opportunities within the basin. Links to the reports and summaries of the projects can be found in the references and reports section below.
