Project Manager

WESTERN COLORADO 2013

This report updates basic data concerning the depth to and elevation of groundwater in three distinct regions of western Colorado plus North Park. Most of the wells for which data are reported were originally constructed or identified in the 1970's by the United States Geological Survey (USGS) as a part of their statewide monitoring well network. The USGS monitoring effort was abandoned in 1982, and in 1991 the State of Colorado Division of Water Resources initiated a program to monitor water levels in about 50 wells of that former monitoring network. In some areas, the wells being monitored are extremely sparse.

The wells listed in this report are now part of a statewide water level monitoring network funded by Senate Bill 200 (1987 Legislative Session). That legislation directed that a portion of the fees collected for applications for water well permits be used for the establishment of a program to monitor ground water levels throughout the state.

Geologic/geographic areas covered in this report include:

- San Juan basin – two wells
- The Colorado Plateau and Grand Mesa – nine wells
- The Piceance basin – thirty-six wells
- North Park – sixteen wells

The monitoring effort continues to evolve with the incorporation of 12 new wells in North Park. This report is also a work in progress. New to the report this year are: new monitoring well location maps, organization by geologic/geographic area, and a modification to the time axis of the hydrographs. All available water level data, for each well, is now plotted as a true time series versus sequential data points. As in previous reports, the accompanying data table only lists data from the last 10 years. The report also contains data from wells, which are part of this monitoring effort, but for which measurements were not available in 2013. Wells lacking measurements in the past 10 years have been removed from the monitoring program and are no longer included in this publication.

The report is organized by geologic/geographic areas. The data for each area is preceeded by a monitoring well location map that shows the wells general location and designation. The aquifers in which these wells are completed include: alluvium, the Fruitland, Mesa Verde, Wasatch, North Park, Coalmont, San Jose, Dakota/Burro Canyon, Green River, Uinta and Parachute Creek members or formations. The specific aquifer being monitored in a well is listed on the data sheet for that well.

An electronic copy of this report, in Adobe PDF format, is available on the Division of Water Resources website

<http://water.state.co.us/groundwater/Pages/HydroGeo.aspx>.

Hardcopy reports may be obtained from the Colorado Division of Water Resources, Public Records Section at 1313 Sherman Street, Room 818, Denver, CO 80203. Additionally, all groundwater level data may be accessed and exported using the tools available on the Colorado Decision Support System website:

<http://cdss.state.co.us/onlineTools/Pages/GroundWaterWaterLevels.aspx>

If you have any question regarding Denver Basin ground water and the information in this report, please contact the Ground Water Information Desk at (303) 866-3587.
