LOST CREEK DESIGNATED GROUND WATER BASIN 2015

This report contains groundwater level data collected from wells in the Lost Creek Designated Basin during the period from 2005 through 2015. Acquisition and publication of this information is a cooperative effort between the well owners, Lost Creek Ground Water Management District and the Colorado Division of Water Resources. The project is part of a statewide groundwater level monitoring program funded by Senate Bill 200 (1987 legislative session). This legislation directed that a portion of the fees collected for water well permit applications be used for the establishment of a program to monitor water level trends throughout the state.

Water level measurements were collected from twenty-six wells in late January 2015. The locations of those wells and the extent of the alluvial aquifer are shown on the following map. GS-6 was removed from the monitoring program this year as access has been lost due to a new pump installation. LC-9 has been added to the program to expand the southern coverage. Well N-1, included in previous reports, will now be included in the Lower South Platte monitoring network.

Previous work in the basin (Topper, 2011) suggests that analysis of groundwater levels by sub-regions is appropriate. Water level measurements are typically recorded in the winter or spring of each year. The 2015 water levels produced the following general conclusions:

North Area: North of Roggen/I-76 to Hwy 34

- Depth to water generally ranges from 5 to 45 feet. Water levels were relatively stable between 2014 and 2015. Longer term averages indicate a decline of approximately 2.5 feet over 5 years, and 3.5 feet over 10 years.

Middle Area: Between Roggen/I-76 and Prospect Valley/Hwy 52

- Depth to water generally ranges from 18 to 67 feet. Water levels both rose and dropped depending upon location between 2014 and 2015. Longer term averages indicate a decline of nearly 5 feet over 5 years, and 12 feet over 10 years.

South Area: South of Prospect Valley/Hwy 52 to 144th Avenue

- Depth to water generally ranges from 42 to 119 feet. Water levels rose an average of 5 feet between 2014 and 2015. Longer term averages indicate a decline of 2 feet over 5 years, and 5 feet over 10 years.

On average, groundwater levels in wells measured by the Division of Water Resources were up by 0.7 feet compared to 2014. The medium term, 5-year trend, showed an average decline of -3.8 feet. Over the long term, 10-year trend, all wells exhibited a decline within the basin with the average being -5.8 feet. To assist stakeholders in evaluating groundwater flow directions and gradients we include a water table elevation map compiled from Spring 2010 that was produced for the basin's 2011 recharge and storage study.

An electronic copy of this report, in Adobe PDF format, is available on the Division of Water Resources website <http://water.state.co.us/groundwater/Pages/HydroGeo.aspx>. Additionally, all groundwater level data may be accessed and exported using the tools available on the Colorado Decision Support System website: <http://cdss.state.co.us/onlineTools/Pages/GroundWaterWaterLevels.aspx>

Hardcopy reports may be obtained from the Colorado Division of Water Resources, Public Records Section at 1313 Sherman Street, Room 818, Denver, CO 80203.

If you have any questions regarding alluvial groundwater and the information in this report, please contact the Groundwater Information Desk at (303) 866-3587.
