NORTH KIOWA-BIJOU DESIGNATED GROUND WATER BASIN 2011

This report represents water level measurement data for the North Kiowa-Bijou Ground Water Management District for February 2011. The project was performed in cooperation with the Management District and with local well owners. Funding for the project is supplied in part from well permit fees collected and managed by the Office of the State Engineer as a cash fund designated for use in obtaining ground water information throughout the state.

A total of 32 wells were measured on February 17, 2011. These wells are all part of the observation well network that has been measured for many years. Records on at least one well date back to 1936, however, measurements from most of the wells date from the 1950's and 1960's.

A map is included with the report showing the locations of the monitoring wells in the basin.

On average, ground water levels in wells measured by the Division of Water Resources were constant compared to 2010. Ground water levels in wells declined by 1.77 feet over the last five-year period and have declined by 5.33 feet over the last ten-year period.

Tabular data in this report are presented for each well for the previous ten years. Graphical data are presented for the entire period of record. Information concerning bedrock wells for the Denver Basin Aquifers will generally be available in June of each year and can be obtained from the Office of the State Engineer. Complete tabular data for the Kiowa-Bijou Designated Ground Water Basin are available by contacting the Office of the State Engineer.

Copies of the report can be purchased from the Office of the State Engineer, Records Section, 1313 Sherman St., Room 821, Denver, CO 80203, (303) 866-3581. Additionally, this data may be accessed on the internet at the Colorado Decision Support System website <http://cdss.state.co.us> and can be exported to a number of different formats.
