GROUNDWATER LEVELS IN THE NORTHERN HIGH PLAINS DESIGNATED BASIN 2018

This report contains the basic groundwater level data collected from wells in the Northern High Plains Designated Ground Water Basin during the winter of 2017-2018. Data were collected in cooperation with the Marks Butte, Frenchman, Sand Hills, Central Yuma, W-Y, Arikaree, East Cheyenne, and Plains Ground Water Management Districts, as well as with local well owners. This data collection effort is part of a statewide groundwater-level monitoring program funded by Senate Bill 200 (1987 legislative session). That legislation authorized the Office of the State Engineer to establish and maintain a water-level monitoring network throughout the state to obtain information on groundwater conditions, to evaluate groundwater trends and to manage the groundwater resources of the state.

During the winter of 2017-2018, a total of 678 wells were measured. Wells which have gone dry, are inaccessible, have been plugged, or are otherwise unusable, are removed from the network and replaced where feasible. The wells in this report are listed first by the management district in which they lie (or county if outside of a management district) then by well name. Tabular data are presented for each well for the previous ten years. Graphical data show the entire period of record for each well. Analyses of changes in the water level in the aquifer are based on single point comparisons and may be complicated by unknown pumping schedules or other site-specific hydrogeologic factors.

The report also contains data from wells, which are part of this monitoring effort, but for which measurements were not available in 2018. The map titled "Monitoring Well Locations" shows the location of these wells in addition to those that were measured in 2018. Wells lacking measurements for the past 10 years have been removed from the monitoring program and are no longer included in this publication, though the data are retained in the Division of Water Resources HydroBase database. To provide a broader perspective of long-term water level trends we have also recorded the initial static water level when the well was constructed, if reported.

Table 1 summarizes some of the statistics gleaned from the data and is organized by management district or county. This information includes the range of water levels recorded and the average change in water levels of all wells in the district on a one, five, and ten year interval. It should be remembered that this value is an average change in water level over all of the wells within the district, which may not be truly representative of the district as a whole.

On average, the water levels were relatively similar to 2017, with declines of approximately 2 feet or less. Since 2017, water levels rose, on average, in the Marks Butte and Plains Ground Water Management Districts and in Washington, Kiowa, and Prowers Counties. The long-term 10-year water level comparisons show a declining trend that ranges from approximately -2 to -8 feet, with the exception of W-Y and Plains Management District where average water levels have actually increased from 1 to 2 feet for that time period and East Cheyenne Management District where average water levels increased by nearly 5 feet.

We have included color-coded maps showing the change in water levels for a one (2017-2018), five (2013-2018), and ten (2008-2018) year period. The maps include all wells within the monitoring program with data for the selected time period. The changes, both positive and negative are displayed by color in accordance with the map key.

An electronic copy of this report is available on the Division of Water Resources website:
<http://water.state.co.us/groundwater/Levels/Pages/HydroGeo.aspx>

Additionally, all groundwater level data may be accessed and exported using the tools available on the Colorado Decision Support System website:

<http://dnrweb.state.co.us/cdss/GroundWater/WaterLevels/Search?submitButton=Submit&SelectedPublicationAreaName=NORTHERN%20HIGH%20PLAINS&SelectedAquiferName>All>

Additionally, all groundwater level data may be accessed and exported using the tools available on the Colorado Decision Support System website:

<http://dnrweb.state.co.us/cdss/GroundWater/WaterLevels/Search>

and the Colorado Information Marketplace HydroBase Bulk Data Exporter:
