

MEMORANDUM

TO: San Luis Valley Notification List

FROM: DWR Modeling and Decision Support System Team
Office of the Colorado State Engineer

DATE: July 1, 2025

SUBJECT: Composite Water Head for Confined Aquifer Response Areas in Division 3:
July 2025 Requirement of Division 3 Groundwater Rules Section 8.1.4

This memorandum is submitted to comply with Section 8.1.4 of the Division 3 Groundwater Rules which states that:

No later than July 1 of each year after 2015, the State Engineer must update the Composite Water Head for each of the Response Areas subject to this Rule 8.1 for the areas depicted in Exhibit C to reflect the most recent annual water level measurements collected during February and March (outside of the Irrigation Season) and display the update in graph form.

Water levels were collected by the Rio Grande Water Conservation District (RGWCD), the US Geological Survey (USGS), and the Colorado Division of Water Resources (DWR) during the non-irrigation season from monitoring network wells identified by DWR¹. Monitoring network wells are listed in Table 1.

The water level data from the monitoring wells are briefly discussed in the following section. Monitoring well data and composite water head calculations are summarized by individual year in Table 2. As detailed in a memo describing the monitoring plan², the composite water head is calculated as a change in water level from the 2015-year baseline. The annual composite water head for each of the confined aquifer response areas through the current year 2025 is shown in Table 3 and Figure 1.

² Kelley Thompson and Mary Halstead (DWR Modeling/DSS), May 6, 2015, "Ground Water Sustainability Rules for Water Division 3: Confined Aquifer Monitoring Plan", Memorandum to Dick Wolfe (Colorado State Engineer/DWR Director) and Mike Sullivan (DWR Deputy State Engineer)

Discussion of Monitoring Well Data

Per the Division 3 Groundwater Rules, the minimum depth to water (maximum water level) in the months of February and March is used to establish the annual water level measurement for each well. However, if reliable data are not available for the well in February or March, the minimum depth to water from November of the prior year through May is used (if available). In some cases, the RGWCD well database includes different estimates on the same day from the USGS and the RGWCD and in this case the RGWCD data are used. Some historical data have been revised and the composite head for past years was revised accordingly. Particularly, data for the BACA wells DW-1, DW-3, DW-4, and DW-5 were recently revised by the USGS which stabilized water level patterns in those wells. Several data have not been used due to specific recommendations or identification of bad measurements. For example, for well ALA4 on the Alamosa Wildlife Refuge, the December 2023 measurement was used for the composite head estimate as the RGWCD advised that pumping initiated before the March 2024 measurement.

Good water level measurements in November through May have not been available for several years for several wells that are considered in the composite water head estimate. In years with missing well data, the composite water head is recalculated such that the change in head from baseline for the missing wells is assumed to be the same as the composite water head for the remaining wells. Wells that have had missing data are shown in Table 4.

2015 Baseline Water Levels

Most 2015 measurements were taken in February and March. Water levels from BACA wells DW-4 and DW-5 were measured by the USGS in May (the unrevised 2014 data remain bad), and two other wells were measured by the USGS in January. Transducer issues limited measurement from Well RGDSS P03 until April, and a graph of the well data suggests the April data is not representative of maximum water levels in the non-irrigation season. The well is located very close to well CON2, and the minimum depth to water in CON2 was nearly identical between 2014 and 2015. Therefore, the baseline water level in RGDSS P03 for use in the composite water head was assumed equal to the maximum non-irrigation season water level in 2014.

2025 Water Levels

Water level measurements for several wells were not available from the 2025 non-irrigation season as of July 1. Three wells (6192R, 11010F, and 1725R) were not measured by the USGS due to funding issues. Well ALA 12 was under water and could not be measured, wells SAG13 and SAG18 have property access issues that have prevented measurement, and a measurement for SAG3 during the non-irrigation season was not available. As of July 1, data from the non-irrigation season were not available for RGDSS wells P1, P3, P7, P8, and P14 which are pressurized and are measured by transducers with dataloggers. It is anticipated that these data will become available later and that the 2025 composite water head will be revised with any additional or revised data.

Table 2. Column Calculation Notes

- (a) Thiessen weight = Thiessen polygon area / total polygon areas for Response Area (rounded to 5 digits)
- (b) minimum annual depth to water during non-irrigation season for 2015 baseline year (minimum DTW in February-March or progressively in other months if February/March DTW not available)
- (c) minimum annual depth to water during non-irrigation season for year (minimum DTW in February-March or progressively in other months if February/March DTW not available)
- (d) date of minimum annual depth to water during non-irrigation season measurement
- (e) change in depth to water calculated as baseline depth to water less year depth to water (a negative value indicates a falling water table)
- (f) change in depth to water multiplied by Thiessen weight used in calculation of composite water head. The composite water head for a Response Area equals the sum of these values divided by the sum of Thiessen weights of wells with data by Response Area for the year.

Table 3. Composite Water Head by Response Area

Response Area	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025
Alamosa La Jara	0.00	1.48	2.31	3.25	0.71	3.38	0.20	-1.64	-2.07	-1.52	-1.21
Conejos	0.00	-0.11	0.25	1.62	-0.38	1.21	-0.82	-1.40	-1.27	-0.83	-1.25
Saguache	0.00	2.43	2.91	3.07	1.41	2.73	1.48	2.47	4.27	4.88	4.22
San Luis Creek	0.00	1.99	3.11	5.27	2.32	2.67	2.59	2.65	1.60	1.84	1.56

Note: Head change in feet from 2015 baseline

Table 4. Missing Annual Well Data

Response Area	Name	Model UID	Thiessen Weight	Years Missing
